

Innovation for food - Top Story

Nette Papier has been successfully dealing with the theme of “packaging and advertising” as a specialist for professional packaging solutions for more than 60 years now. The result of the joint packaging development is environmentally-friendly and heat-resistant packaging as a sustainable alternative to shells of aluminum or PE or silicone coating. The heat-resistant food packaging can be individually adapted to the most varied product shapes in terms of size. Thanks to the joint-free design, it is suitable for use with greasy and oily products. The environmentally-friendly food packaging unites ecological principles with a high degree of efficiency and simple handling.

Nette Papier GmbH

Graduate of business management Michael Nette, CEO

Environmental consciousness is a central societal challenge. Ecological principles also have a high priority in the packaging world, and the focus is on the sustainable development of environmentally-friendly packaging of corrugated cardboard, including for food packaging in the retail trade. Diplom Kaufmann (graduate of business management) Michael Nette, CEO of Nette Papier, found in THIMM the right partner for the development of environmentally-friendly and forward-looking food packaging and has the following to say about the cooperation:

“We have thought of the future together with THIMM!”

CUSTOMER BENEFITS

100% safe direct food contact

- » Certified and heat-resistant food packaging for baking at 180°C for up to 180 minutes or at 220°C for up to 30 minutes
